

The Spirit: That Stranger Inside Us by Jean- Émile Charon

Book: The Spirit: That Stranger Inside Us

"Charon muses in his book *The Spirit: That Stranger Inside Us*: "There are microscopic individualities inside every human. They think, they know, and (they) carry Spirit in the Universe." [2] Charon chooses to call these individual beings of intelligence, "eons." They are otherwise known as electrons. Each electron or "eon" is an enclosed space, a thinking entity, intelligence, and even a micro-universe. But this is an inaccurate way of speaking about them, because as Michael Talbot warns us in *The Holographic Universe* (1991), "the only time quanta ever manifest as particles is when we are looking at them." [3] Thus, it would be more accurate to think of these beings in terms of wave interference patterns.

"You are the 'spiritual intersection' of all these particles," continues Charon [4] "Your eons will remember you, your 'I,' for all their lives. They'll carry it with them in their future life....And this future life in the body of eons will be very long, almost as long as the Universe itself." [5] Suggests Charon, "the electrons which form my body are not only carriers of what I call 'my' spirit, but, in fact constitute my spirit itself." [6] Electrons are sent individually into the Universe to learn and to increase the order of the Universe; "the psychic level of the whole Universe progressively elevates itself...during the 'successively lived experiences' of elemental matter." [7] The goal of each electron is to increase its energy to the highest level of sustainable excitement; that is, to contain the most information within the largest stable system of organization possible. The electron becomes part of increasingly more complex forms; living the life cycle of that form. At the death of that form, electrons leave the body, taking their informational energy with them.

The goal of the electron is developing the order of its Spirit. There are four psychic forces that organize living forms into entities of increasing energy or order: reflection, knowledge, love, and action. As the order grows, so do the psychic properties.

Ecstasy, says Charon, is the higher level of excitement felt when the electron fills one plane with photon energy, to the threshold at which it jumps to the next quantum level—ignites, until the entire system is fully energized.

"(A)n interaction of 'internal Love' exists among the electrons of our body, alongside the interaction of 'external Love,' between our electrons and those of 'others'." [8] By linking with the 'other' through love or knowledge, the electron increases its order and ability to hold organized energy. "It finally increases its spiritual faculties; its '[consciousness](#)'....To grow spiritually is to project more of our Love toward 'others'." [9] "Love is the simplest and most efficient process to increase negentropy (order) in the Universe." [10] Charon explains addiction to TV, computers, and music listening in terms of the attraction of our electrons to that which increases order and energy to their informational richness. It is an inbuilt desire to become part of that larger order. This also explains the phenomenon of mob mind." (Source [Wikipedia](#)), (Read the first chapter [here!](#)), (buy the book [here](#))

CHAPTERS

One PHYSICS AND METAPHYSICS

Spirit inseparable from Physics research - Newton the alchemist - Voltaire and Valéry: spiritualist

atheists - Creative science and science of discovery - Scientific research and the "general public" - Of multiple languages to describe Nature.

Two THE SPACE AND TIME OF THE SPIRIT

A new space-time: that of Spirit - Memory - A space of non-diminishing negative entropy - Of "eternal" carrier particles of the Spirit - Death, behold thy defeat! - Our "I" takes root in an eternal past and will prolong itself in an eternal future.

Three LANGUAGES OF DESCRIPTION IN PHYSICS

Descartes and description by "figures and movements" - Einsteinian Relativity of time and space - Geometrisation of Physics - Is probability incompatible with a complete geometrisation of Physics? - Need for new revolution in concepts of space and time to incorporate Spirit.

Four COMPLEX SPACE-TIME

Matter and Spirit unified in a complex space-time - "Point" of traditional space-time an extended domain - "Black holes" as proof of complexity of space and time - Account of voyage toward a black hole - Space-time of black holes memorizes and ordains events, as does Spirit.

Five ELECTRON: CARRIER OF THE SPIRIT

Space-time of electron comparable to that of black holes - Review of current concepts on "elementary" particles - Particle "hollows out" space as does black hole - "Closed" space of the electron, and its virtual interactions "at a distance" - Electron is carrier of "spiritual" space - Proofs of psychism at particle level - Communications between Man and Spirit of Matter - Symbolic representation of Matter and Spirit in the Universe.

Six A NEO-TEILHARDIAN EVOLUTION

Comparison to Teilhardian concepts - Evolution according to Teilhard's law of complexity-consciousness - "Spiritual" electron actually contains our entire "I" - Spiritual adventure of humankind is centered on the elementary . . . and we are this elementary.

Seven OBSERVATION OF SPIRIT IN MATTER

Our Spirit inseparable from our bodies - Overcoming our corporal death - The living cell and chromosomes - Cellular duplication and sexual reproduction - One who creates is "more conscious" than one created - "God doesn't shoot dice."

Eight ETERNAL RAMIFICATIONS OF OUR SPIRIT

What does my Spirit become after my death? - Chance incapable of replacing Spirit in evolutionary process - Biological and "logical" proofs that my entire "I" is carried by each of the electrons of my body - My cosmic "I" is richer than conscious "I" of my present-day life - We will be reunited forever with our ancestors and descendants.

Nine MECHANISMS OF THE SPIRIT & PARAPSYCHOLOGY

An imaginary telepathic communication with mummy of Ramses II - Scientific bases of parapsychology - First

"analogical" approach to mechanisms of the Spirit - Our "reincarnation" in new lives - Return of our conscious "I," our unconscious "I," and their union in our cosmic "I" - Creation and reasoning - Do you know that trees speak?

Ten SPIRIT FUNCTIONING AS PHYSICS PHENOMENON

Structure of spiritual electron - Role of "spin" in spiritual mechanisms - Negentropic enrichment of electronic space - Mathematical tool to describe Spirit already exists - Electron knows to store and use energy - Asymmetrical carbon and topology of the Living - Louis Pasteur: precursor of genius.

Eleven REFLECTION, KNOWLEDGE, LOVE & ACTION

Four interactions of electron with external world and Spirit of the Other - Description in language of Physics - Informational enrichment and negentropic increase of electron's space by Knowledge and Love - Love is a telepathic process - A neo-Gnostic Physics.

Twelve CASE FOR A COPERNICAN EVOLUTION

We must stop thinking about an evolution of entire Universe centered on Man - Cosmic spiritual adventure takes root on particles present in entire cosmic Universe: "thinking" electrons or eons - Man still spiritually present among people of eons - If you are a sage. . . .

Thirteen A NEO-GNOSTIC COSMOLOGY: EVOLUTION OF MATTER

Inherent cosmology of Spirit inseparable from inherent cosmology of Matter - Present "models" of Universe of Matter - Beginning, expansion, contraction and end of our Universe - Model of Universes deduced from Complex Relativity - Birth of electrons and Spirit.

Fourteen A NEO-GNOSTIC COSMOLOGY: EVOLUTION OF SPIRIT

Universe "in waiting" - Spirit is born - "Couples" of positive and negative electrons - Eons need "machines" - Evolution as consequence of play of four "deterministic" physical interactions and four "free" psychic interactions.

Fifteen MATRIXISM

Spirit doesn't know final objective of Spirit - Structuralist language and matrixist language - Sign and signified - Matrixes of natural language - Reflection produces languages for abstract meaning and artificial signs - The animal also knows abstract languages - Man's place in context of matrixism - Cosmic spiritual adventure and Reincarnation - Knowledge and Love as means for Spirit to discover objective of its adventure.

Sixteen THE UNKNOWN FUTURE

Review of Cosmology of Universe of Spirit - One can preview "deterministic" evolution of Matter - Spirit is ever weaving its web in space - "Little green men" perhaps particles of cosmic radiation - Universe evacuates matter little by little to preserve only population of eons - Our "I" and the "last machine."
